Business Requirements Document (BRD)

Project: TeachHub Lagos – A Centralised Digital Resource Platform for Educators

Document Information	Details
Project Name	TeachHub Lagos
Document Type	Business Requirements Document (BRD)
Project Domain	Education Technology (EdTech)
Project Location	Lagos State, Nigeria
My Role	Business Analyst
Project Team	3 members
Project Status	Functional Proof of Concept

---

1. Executive Summary

TeachHub Lagos is a centralised digital platform designed to help educators access, create, organise, and share educational resources.

The project addresses challenges faced by Nigerian teachers in finding curriculum-aligned instructional materials, organising lesson content, and accessing reliable digital teaching resources.

The proposed solution provides a web-based environment where teachers can manage lessons, upload educational resources, create quizzes, and share learning materials. Administrators are provided with user and content management capabilities.

This Business Requirements Document outlines the business problem, objectives, stakeholder needs, project scope, and high-level requirements that guided the development of the platform.

2. Business Background

The increasing use of digital technology in education has created opportunities for teachers to access and share instructional resources. However, educators still experience difficulties finding suitable resources that align with the Nigerian curriculum.

Existing approaches often involve searching multiple websites, storing materials on personal devices, and sharing resources through informal communication channels.

These practices can make it difficult to organise, retrieve, and reuse teaching materials.

TeachHub Lagos was conceived as a centralised platform to address these challenges, using Lagos State as the project's case study.

3. Business Problem Statement

Teachers face challenges accessing curriculum-aligned digital teaching resources and managing instructional materials efficiently.

The project research identified the following problems:

- Difficulty finding digital resources aligned with relevant curricula.
- Excessive time spent searching for teaching materials.
- Difficulty organising and retrieving previously created lesson materials.
- Reliance on informal resource-sharing channels such as WhatsApp groups.
- Risk of losing teaching materials stored on personal devices.

These challenges informed the need for a centralised digital resource-management platform.

4. Research and Business Needs

4.1 Requirements Gathering Approach

The project used a combination of:

- Questionnaires.
- Semi-structured interviews.
- Observation of classroom and online teaching sessions.

The questionnaire involved 20 teachers, while semi-structured interviews were conducted with five teachers.

4.2 Key Research Findings

Identified Challenge or Insight	Research Finding
Difficulty finding curriculum-aligned digital resources	80%
Teachers spending 4+ hours weekly searching for materials	75%
Reliance on WhatsApp groups and informal networks	65%
Difficulty organising and retrieving past lesson materials	85%
Teachers willing to use a centralised platform	90%
Teachers primarily using smartphones to access resources	95%
Teachers regularly experiencing slow internet connectivity	60%
Preference for mobile-first, simple interfaces	100%

4.3 Business Implications

The findings highlighted the need for a platform that:

1. Centralises educational resources.
2. Supports subject and grade-level categorisation.
3. Makes lesson creation and resource management easier.
4. Provides a simple, mobile-responsive user experience.
5. Supports secure access for teachers and administrators.

5. Business Objectives

The key business objectives were to:

1. Improve access to educational resources through a centralised digital platform.
2. Support the creation and management of digital lessons.
3. Improve the organisation and retrieval of instructional materials.
4. Enable educators to upload and share learning resources.
5. Provide administrative controls for managing users and permissions.
6. Develop a mobile-responsive platform that reflects teachers' device preferences.

6. Stakeholder Identification

The following stakeholder groups were identified from the project context.

Stakeholder	Interest / Responsibility
Teachers	Create, manage, upload, access, and share educational content
Administrators	Manage user accounts, roles, permissions, and platform content
Project Business Analyst	Analyse business needs, document requirements, and support validation
Frontend Developer	Implement the user-facing application
Backend Developer	Implement backend functionality and database interactions

6.1 Primary Stakeholders

Teachers

Teachers are the primary users of the platform. They need to create and manage lessons, upload resources, organise content, and share educational materials.

Administrators

Administrators oversee platform users, manage roles and permissions, and maintain control over platform-wide content.

7. Project Scope

7.1 In Scope

The project included the following core capabilities:

- User registration and authentication.
- Role-based access for teachers and administrators.
- User profile management.
- Course and lesson creation.
- Lesson editing and management.
- Uploading educational resources.
- Categorisation by subject and grade level.

- Attaching images and videos.
- Quiz and flashcard creation.
- Lesson preview and publishing.
- Administrative user and content management.

7.2 Out of Scope / Future Enhancements

The following capabilities were identified as potential future enhancements rather than core deliverables of the current project:

- Offline resource downloads.
- Multilingual support, including Yoruba, Hausa, and Igbo.
- Teacher collaboration forums.
- Professional development and training modules.
- Subscription and payment integration.

8. High-Level Business Requirements

ID	Business Requirement	Priority
BR-01	The platform must provide a centralised environment for educational resources.	High
BR-02	Teachers must be able to create and manage lessons.	High
BR-03	Users must be able to upload and organise educational resources.	High
BR-04	Resources must be categorised by subject and grade level.	High
BR-05	The platform must support secure user authentication.	High
BR-06	The platform must distinguish between teacher and administrator permissions.	High
BR-07	Teachers must be able to create quizzes and learning materials.	Medium
BR-08	The platform must provide a simple, mobile-responsive interface.	High
BR-09	Administrators must be able to manage users and platform content.	High
BR-10	Teachers must be able to preview lesson content before publishing.	Medium

Priority labels represent the proposed business prioritisation for this portfolio document.

9. Business Rules

The project requirements established the following rules:

1. Users must authenticate before accessing protected platform functionality.
2. Administrators manage user accounts, roles, and permissions.
3. Teachers can create, edit, and manage their lessons.
4. Teachers can upload and share educational resources.
5. Educational resources should be categorised by subject and grade level.
6. Resource deletion is restricted to administrators.
7. Teachers can set created lesson content to private or global mode.
8. Lesson content should be previewed before publishing.

10. Non-Functional Business Expectations

The platform was expected to meet the following quality expectations:

Usability

- Simple and intuitive interface.
- Consistent navigation.
- Minimal technical training required.

Accessibility and Device Support

- Mobile-first design.
- Access through modern web browsers.
- Support for smartphones, tablets, and desktop devices.

Security

- Secure authentication.
- Role-based access control.
- Appropriate protection of user accounts and platform resources.

Performance

- Consideration of users experiencing slow internet connectivity.
- Responsive application performance.

11. Project Constraints and Considerations

The project was developed as an academic prototype within a defined project timeframe.

Important considerations included:

- The need to prioritise core functionality.
- The varying digital access conditions experienced by teachers.

- The high preference for smartphone access.
- The need to keep the solution manageable within the project scope.

12. Expected Business Benefits

The intended benefits of the platform included:

- Easier access to educational resources.
- Improved organisation of teaching materials.
- Reduced dependence on informal resource-sharing channels.
- Reusable digital lesson content.
- Better management of educational resources.
- A centralised environment for teachers and administrators.

These are intended benefits; the project should not be presented as having independently proven long-term educational impact.

13. Business Analysis Contribution

As the Business Analyst, my contribution focused on understanding the problem and translating user needs into requirements that the development team could implement.

My activities included:

- Reviewing questionnaire and interview findings.
- Identifying recurring user pain points.
- Analysing stakeholder needs.
- Defining business objectives and project scope.
- Documenting functional and non-functional requirements.
- Supporting system analysis and modelling.
- Collaborating with the frontend and backend developers.
- Supporting testing and requirements validation.

14. Project Outcome

TeachHub Lagos resulted in a functional proof-of-concept web application.

The implemented platform included user management, lesson creation, resource uploading, and role-based access control.

The application was deployed using Vercel and can be accessed at:

https://teachhub-ng-2026.vercel.app

The project remains an academic prototype rather than a production-ready platform.

15. Related Documentation

The following documents provide further detail about the project:

- Functional Requirements Document (FRD).
- User Stories.
- Use Cases.
- System Design Diagrams.
- Entity Relationship Diagram (ERD).
- Testing and Validation Documentation.
